& REMODELING, LLC**

Basements

Although we do basement remodels of all kinds, there are some things you need to consider before you get your basement finished out. Make sure your walls are dry as damp walls or leaks can lead to mold and mildew in your home. Also, when you inspect your basement, or have us do it, make sure you pay attention to any cracks that might be in the foundation. If you find any this could lead to a larger problem.

It is critical to have any of these issues resolved before investing in any type of remodel. We have a lot of experience at identifying and coming up with solutions to these kinds of problems.
